Licence Subclass Concordance Table

List of Licence Subclasses

Schedule I

Licence subclasses in the general contractor's and the general owner-builder's licence classes

1.1.1¹ New residential buildings covered by a guaranty plan, Class I

This subclass authorizes construction work relating to

- ◆ single family detached, duplex or town house dwelling, whether or not it is held in divided co-ownership;
- ◆ multifamily building, from a duplex to a quintuplex, that is not held in divided co-ownership;
- ◆ a multifamily building of more than 5 units, held by a non-profit organization or a cooperative and not held in divided co-ownership.

It also authorizes construction work in subclasses 2.6, 3.1, 4.1, 5.1 and 6.1 of Schedule II, relating to a new residential building covered by this subclass.

1.1.2¹ New residential buildings covered by a guaranty plan, Class II

This subclass authorizes construction work relating to a multifamily building held in divided co-ownership, of combustible construction or non-combustible construction, the latter comprising no more than 4 private portions stacked one above the other.

It also authorizes construction work in subclasses 2.6, 3.1, 4.1, 5.1 and 6.1 of Schedule II, relating to a new residential building covered by this subclass.

In this subclass,

- ◆ “combustible construction” means a combustible construction within the meaning of the National Building Code – Canada 1995 (NRCC 38726E) including the revisions of July 1998 and November 1999 issued by the Canadian Commission on Building and Fire Codes of the National Research Council of Canada;
- ◆ “non-combustible construction” means a non-combustible construction within the meaning of the National Building Code – Canada 1995 (NRCC 38726E) including the revisions of July 1998 and November 1999 issued by the Canadian Commission on Building and Fire Codes of the National Research Council of Canada.

1.2 Small buildings

This subclass authorizes construction work relating to

- ◆ buildings not referred to in subclass 1.1.1 or 1.1.2 that are referred to in Part 9 of the National Building Code – Canada

1995 (NRCC 38726E) as adopted by Chapter I of the Building Code approved by Order in Council 953-2000 dated 26 July 2000, without regard to the exemptions in Division II of the Regulation respecting the application of the Building Act, made by Order in Council 954-2000 dated 26 July 2000;

- ◆ buildings referred to in subclasses 1.1.1 and 1.1.2 and in Part 9 of the National Building Code, to the extent that the work is subcontracted on behalf of the holder of a licence in subclass 1.1.1 or 1.1.2;
- ◆ tents referred to in paragraph 2 of section 3.4 of the Regulation respecting the application of the Building Act.

It also authorizes construction work in subclasses 2.6, 3.1, 4.1, 5.1 and 6.1 of Schedule II relating to a building or a tent referred to in this subclass.

Lastly, it authorizes similar or related construction work.

1.3 All buildings

This subclass authorizes construction work on any building, including those of subclass 1.2, and construction work on inflatable structures referred to in paragraph 2 of section 3.4 of the Regulation respecting the application of the Building Act.

It also authorizes construction work relating to a new residential building in this subclass to the extent that the work is subcontracted on behalf of the holder of a licence in subclass 1.1.1 or 1.1.2.

This subclass authorizes construction work in subclasses 2.6, 3.1, 4.1, 5.1 and 6.1 of Schedule II relating to a building or inflatable structure covered by this subclass.

Lastly, it authorizes similar or related construction work.

1.4 Roads and mains

This subclass authorizes construction work relating to roads and public thoroughfares, sewers, water mains, pipelines, railroad structures and tunnels.

It also authorizes construction work in subclasses 3.1, 4.1, 5.1 and 6.1 of Schedule II relating to civil engineering structures covered by this subclass.

This subclass also authorizes construction work in subclass 1.6, but only to have it carried out when it is related to civil engineering structures covered by this subclass.

Lastly, it authorizes similar or related construction work.

1. These subclasses cannot be granted to owner-builders.

1.5 Civil engineering structures

This subclass authorizes construction work relating to civil engineering structures made of reinforced concrete, metal or other material and electric generating works.

It also authorizes construction work in subclasses 3.1, 4.1, 5.1 and 6.1 of Schedule II relating to civil engineering structures covered by this subclass. This subclass also authorizes construction work in subclass 1.6 but only to have it carried out, when it is related to civil engineering structures covered by this subclass.

Lastly, it authorizes similar or related construction work.

1.6 Underwater civil engineering

This subclass authorizes construction work relating to underwater civil engineering structures related to water intakes, sewer outlets, bridge piers and caissons.

It also authorizes construction work in subclasses 3.1, 4.1, 5.1 and 6.1 of Schedule II, when it is related to civil engineering structures covered by this subclass.

Lastly, it authorizes similar or related construction work.

1.7 Telecommunications, transmission, transformation and distribution of electric power

This subclass authorizes construction work relating to electric power transformation and telecommunications stations and overhead and underground lines for electric power transmission, dispatching and distribution, and for telecommunications.

It also authorizes construction work in subclasses 3.1, 4.1, 5.1 and 6.1 of Schedule II when it is related to civil engineering structures covered by this subclass.

This subclass also authorizes construction work in subclass 1.6, but only to have it carried out, when it is related to civil engineering structures covered by this subclass.

Lastly, it authorizes similar or related construction work.

1.8 Petroleum equipment installation

This subclass authorizes construction work relating to installations for the use, storage or distribution of petroleum products and similar or related construction work.

1.9 Building mechanicals

Subject to the second paragraph of section 6 of this Regulation, this subclass authorizes construction work relating to building mechanicals of a building, facilities intended for use by the public or civil engineering structures, such as heating, ventilation, refrigeration, plumbing, fire protection and their control systems, as well as insulation and emergency electrical supply systems.

It also authorizes construction work in a subclass of Schedule III that is not already authorized by the first paragraph, when such work is part of a project related to building mechanicals of buildings, facilities intended for use by the public or civil engineering structures.

Lastly, it authorizes similar or related construction work.

1.10 Mechanical lifts

This subclass authorizes construction work relating to mechanical lifts and conveyors referred to in paragraph 7 of section 3.4 of the Regulation respecting the application of the Building Act.

It also authorizes construction work in subclasses 3.1, 4.1, 5.1 and 6.1 of Schedule II, when it is related to a mechanical lift or conveyor covered by this subclass.

Lastly, it authorizes similar or related construction work.

List of Licence Subclasses

Schedule II

Licence subclasses in the specialized contractor's and the specialized owner-builder's licence classes

2.1 Drilled wells

This subclass authorizes construction work relating to the sinking of wells and water collection, and similar or related construction work.

2.2 Non-drilled water collection structures

This subclass authorizes construction work relating to non-drilled water collection structures such as shallow wells and springwater collection, and similar or related construction work.

This subclass applies only for the purposes of section 58.

2.3 Underground water pumping systems

This subclass authorizes construction work that is not reserved exclusively for master pipe-mechanics or electricals relating to underground water pumping systems, and similar or related construction work.

2.4 Private sewerage systems

This subclass authorizes construction work that is not reserved exclusively for master pipe-mechanics relating to building sewage treatment, and similar or related construction work.

2.6 Piles and special foundations

This subclass authorizes construction work relating to soil mechanics such as piles and caissons, cofferdams, tiebacks, underpinning or grouting of soil and rock.

It also authorizes construction work in subclass 2.5 of Schedule III.

Lastly, it authorizes similar or related work.

2.8 Blasting

This subclass authorizes construction work relating to drilling, loading of holes and firing explosives and similar and related construction work.

3.1 Concrete structures

This subclass authorizes construction work relating to cast or precast structural concrete.

It also authorizes construction work in subclass 3.2 of Schedule III.

Lastly, it authorizes similar or related construction work.

4.1 Masonry structures

This subclass authorizes construction work relating to structural masonry and masonry outer wall.

It also authorizes construction work in subclass 4.2 of Schedule III.

Lastly it authorizes similar or related construction work.

5.1 Metallic structures and pre-fabricated concrete elements

This subclass authorizes construction work relating to metallic structures and steel structural elements as well as structural assembly work using prefabricated concrete elements.

It also authorizes construction work in subclass 5.2 of Schedule III.

Lastly, it authorizes similar or related construction work.

6.1 Wood structures

This subclass authorizes construction work relating to wood structures.

It also authorizes construction work in subclass 6.2 of Schedule III.

Lastly, it authorizes similar or related construction work.

10. Solid fuel local heating systems

This subclass authorizes construction work that is not exclusively reserved for master pipe-mechanics or electricals relating to solid fuel local heating systems, such as stoves and prefabricated fireplaces, and similar or related construction work.

11.1 Pressurized industrial or institutional piping

This subclass authorizes construction work that is not exclusively reserved for master pipe-mechanics relating to the installation of pressurized industrial or institutional piping, and similar or related construction work.

13.1 Lightning protection

This subclass authorizes construction work that is not exclusively reserved for electricals relating to lightning protection installations, and similar or related construction work.

13.2 Fire alarm systems

This subclass authorizes construction work that is not exclusively reserved for electricals relating to fire alarm systems, and similar or related construction work.

13.3 Fire extinguishing system

This subclass authorizes construction work that is not exclusively reserved for master pipe-mechanics relating to automatic water sprinkler systems, fire protection standpipe, and similar or related construction work.

13.4 Local fire extinguishing systems

This subclass authorizes construction work relating to local fire extinguishing systems using a product stored in a tank and similar or related construction work.

14.1 Passenger and freight elevators

This subclass authorizes construction work that is not exclusively reserved for electricals relating to passenger and freight elevators, dumbwaiters, escalators, moving walks and material lifts governed by the current edition of CAN/CSA B44 Safety Code for Elevators and Freight Elevators, rendered applicable by Chapter IV of the Construction Code approved by Order in Council 895-2004 dated 22 September 2004 and defined in that Code, and related construction work.

14.2 Lifts for persons with physical disabilities

This subclass authorizes construction work that is not reserved exclusively for electricals relating to lifts for persons with physical disabilities governed by the current edition of standards CAN/CSA B355 Lifts for Persons with Physical Disabilities and CAN/CSA B613 Private Residence Lifts for Persons with Physical Disabilities, rendered applicable by Chapter IV of the Construction Code and defined in those standards, and related construction work.

14.3 Other types of elevators

This subclass authorizes construction work that is not reserved exclusively for electricals relating to elevators not in subclass 1.10 provided for in Schedule I and in subclasses 14.1 and 14.2 and related construction work.

15.1¹ Pulsed air heating systems

This subclass authorizes construction work reserved exclusively for master pipe-mechanics under the Master Pipe-Mechanics Act (R.S.Q., c. M-4) relating to pulsed air heating systems.

It also authorizes construction work that is not already authorized by the first paragraph and relating to pulsed air heating systems, particularly those relating to propane gas burners and those included in subclass 15.1.1.

In addition, this subclass authorizes construction work relating to pulsed air heating and air conditioning systems. However, work relating to heating and air conditioning devices that are part of such systems may not be carried out unless the contractor also holds the appropriate subclass 15.9 or 15.10.

Lastly, it authorizes related construction work.

15.1.1 Pulsed air heating systems for certain work that is not reserved exclusively for master pipe-mechanics

This subclass authorizes maintenance work relating to pulsed air heating systems, including propane gas burners that are part of them.

It also authorizes construction work relating to heating systems referred to in the first paragraph that is carried out in the territory of a local municipality with fewer than 5,000 inhabitants, except if there is a public sewer system, or in an unorganized territory.

In addition, this subclass authorizes construction work relating to pulsed air heating and air conditioning systems that is carried out in the territories referred to in the second paragraph. However, work relating to heating and air conditioning devices that are part of such systems may not be carried out unless the contractor also holds the appropriate subclass 15.9 or 15.10.

Lastly, it authorizes related construction work.

15.2¹ Natural gas burners

This subclass authorizes construction work that is reserved exclusively for master pipe-mechanics under the Master Pipe-Mechanics Act relating to natural gas combustion systems.

It also authorizes construction work in subclass 15.2.1. Lastly, it authorizes related construction work.

15.2.1 Natural gas burners for certain work that is not reserved exclusively for master pipe-mechanics

This subclass authorizes maintenance work relating to natural gas combustion systems.

It also authorizes construction work relating to natural gas combustion systems that is carried out in the territory of a local municipality with fewer than 5,000 inhabitants, except if there is a public sewer system, or in an unorganized territory.

Lastly, it authorizes related construction work.

15.3¹ Oil burners

This subclass authorizes construction work reserved exclusively for master pipe-mechanics under the Master Pipe-Mechanics Act relating to oil combustion systems.

It also authorizes construction work in subclass 15.3.1. Lastly, it authorizes related construction work.

15.3.1 Oil burners for certain work that is not reserved exclusively for master pipe-mechanics

This subclass authorizes maintenance work relating to oil combustion systems.

It also authorizes construction work relating to oil combustion systems that is carried out in the territory of a local municipality with fewer than 5,000 inhabitants, except if there is a public sewer system, or in an unorganized territory.

¹ The Corporation of Master Pipe-Mechanics of Quebec (CMMTQ) handles the contractor's Professional Qualification for this subclass.

Lastly, it authorizes related construction work.

15.4¹ Hydronic heating systems

This subclass authorizes construction work reserved exclusively for master pipe-mechanics under the Master Pipe-Mechanics Act relating to hydronic heating systems.

It also authorizes construction work that is not already authorized by the first paragraph and relating to hydronic heating systems, particularly those relating to propane gas burners and those included in subclass 15.4.1.

In addition, this subclass authorizes construction work relating to hydronic heating and air conditioning systems. However, work relating to heating and air conditioning devices that are part of such systems may not be carried out unless the contractor also holds the appropriate subclass 15.9 or 15.10.

Lastly, it authorizes related construction work.

15.4.1 Hydronic heating systems for certain work that is not reserved exclusively for master pipe-mechanics

This subclass authorizes maintenance work relating to hydronic heating systems, including propane burners that are part of the systems.

It also authorizes construction work relating to heating systems referred to in the first paragraph and that is carried out in the territory of a local municipality with fewer than 5,000 inhabitants, except if there is a public sewer system, or in an unorganized territory.

In addition, this subclass authorizes construction work relating to hydronic heating and air conditioning systems carried out in the territories referred to in the second paragraph. However, work relating to heating and air conditioning devices that are part of such systems may not be carried out unless the contractor also holds the appropriate subclass 15.9 or 15.10.

Lastly, it authorizes related construction work.

15.5¹ Plumbing

This subclass authorizes construction work that is reserved exclusively for master pipe-mechanics under the Master Pipe-Mechanics Act relating to plumbing systems in any building or structure, including piping and all the fixtures used for drainage, back venting of traps, hot and cold water supply or gas supply.

It also authorizes construction work in subclass 15.5.1. Lastly, it authorizes related construction work.

15.5.1 Plumbing for certain work that is not reserved exclusively for master pipe-mechanics

This subclass authorizes maintenance work relating to plumbing systems in any building or structure, including piping and all fixtures used for drainage, back venting of traps, hot and cold water supply or gas supply.

It also authorizes construction work relating to plumbing systems referred to in the first paragraph and carried out in the territory of a local municipality with fewer than 5,000 inhabitants, except if there is a public sewer system, or in an unorganized territory.

Moreover, this subclass authorizes construction work relating to plumbing installations that are not building installations and that are outdoors.

Lastly, it authorizes related construction work.

15.6 Propane

This subclass authorizes construction work that is not reserved exclusively for master pipe-mechanics relating to installations for the use, storage or distribution of propane gas, including their components and fixtures, and similar or related construction work.

15.7 Residential ventilation

This subclass authorizes construction work that is not reserved exclusively for master pipe-mechanics relating to air circulation or distribution systems related to ventilation, exhaust, air compensation and air conditioning of single family dwellings, duplexes or town houses and private portions of multi-family dwellings held in divided co-ownership.

It also authorizes, for buildings referred to in the first paragraph, construction work relating to the heating duct systems and the installation of the heating devices of a pulsed air heating system as well as construction work relating to the heating duct systems of a pulsed air heating and air conditioning system.

In addition, this subclass authorizes, for the same buildings, construction work relating to the heating and air conditioning devices of a pulsed air system provided that the contractor also holds the appropriate subclass 15.9 or 15.10.

Lastly, it authorizes similar or related construction work.

15.8 Ventilation

This subclass authorizes construction work that is not reserved exclusively for master pipe-mechanics relating to air circulation or distribution systems related to ventilation, exhaust, air compensation and air conditioning.

It also authorizes construction work relating to the heating duct systems and the installation of the heating devices of a pulsed air heating system as well as construction work relating to the heating duct systems of a pulsed air heating and air conditioning system.

¹ The Corporation of Master Pipe-Mechanics of Quebec (CMMTQ) handles the contractor's Professional Qualification for this subclass.

In addition, that subclass authorizes construction work relating to the heating and air conditioning devices of a pulsed air system provided that the contractor also holds the appropriate subclass 15.9 or 15.10.

Lastly, it authorizes similar or related construction work.

15.9 Small refrigeration systems

This subclass authorizes construction work that is not reserved exclusively for master pipe-mechanics relating to air-conditioning refrigeration systems with a cooling capacity not exceeding 20 kilowatts and a refrigerant of group A1, A2 or a mixture of both, according to the classification in the table on refrigerants and charges of the CSA B-52 Mechanical Refrigeration Code, published by the Canadian Standards Association.

It also authorizes construction work relating to the heating and air conditioning devices of a pulsed air system, whose capacity does not exceed 40 kW and that use a refrigerant referred to in the first paragraph, provided that the contractor also holds the appropriate subclass 15.1, 15.1.1, 15.7 or 15.8.

In addition, this subclass authorizes construction work relating to the heating and air conditioning devices of a hydronic system, whose capacity does not exceed 40 kW and that use a refrigerant referred to in the first paragraph, provided that the contractor also holds the appropriate subclass 15.4 or 15.4.1.

It also authorizes similar or related construction work.

15.10 Refrigeration

This subclass authorizes construction work that is not reserved exclusively for master pipe-mechanics relating to any refrigeration system, including work related to air-conditioning, industrial processes and food preservation.

It also authorizes construction work relating to the heating and air conditioning devices of a pulsed air system provided that the contractor also holds the appropriate subclass 15.1, 15.1.1, 15.7 or 15.8.

In addition, this subclass authorizes construction work relating to the heating and air conditioning devices of a hydronic system provided that the contractor also holds the appropriate subclass 15.4 or 15.4.1.

Lastly, it authorizes similar or related construction work.

16¹ Electrical

Except for demolition work, this subclass authorizes construction work on an electrical installation to which applies Chapter V of the Construction Code, introduced by the Regulation to amend the Construction Code approved by Order in Council 961-2002 dated 21 August 2002, that is reserved exclusively for electricals.

It also authorizes construction work relating to fixtures permanently connected to the electrical installation, if it is governed by Chapter V of the Construction Code and if it is not specifically governed by another subclass and construction work in subclasses 13.2 and 17.1.

Lastly, it authorizes related construction work.

17.1 Instrumentation and control systems

This subclass authorizes construction work that is not reserved exclusively for electricals relating to instrumentation and control systems.

It also authorizes construction work in subclass 17.2 of Schedule III. Lastly, it authorizes similar or related construction work.

¹ The Corporation of Master Electricians of Quebec (CMEQ) handles the contractor's Professional Qualification for this subclass.

List of Licence Subclasses

Schedule III

Licence subclasses in the specialized contractor's licence class

These subclasses do not require evaluation of knowledge in the Carrying out of Construction Work and cannot be requested by owner-builders.

2.5 Excavation and earthwork

Except for the work in subclasses 2.2 and 2.4 of Schedule II, this subclass authorizes construction work relating to excavating, moving, compacting and levelling of earth or granular materials, including work relating to small works of art, and similar or related construction work.

2.7 Sitework

This subclass authorizes construction work relating to the preparation and finishing of sitework, such as alignment, levelling, fencing, demolition, paving and asphaltting, laying interlocking paving stones, and similar or related construction work.

3.2 Small concrete works

This subclass authorizes construction work relating to concrete formwork for foundation walls of buildings referred to in Part 9 of the National Building Code – Canada 1995 (NRCC 38726E) as adopted by Chapter I of the Building Code, without regard to the exemptions in Division II of the Regulation respecting the application of the Building Act and to other concrete works, concreting, reinforcement and concrete finishing, and similar or related construction work.

4.2 Non-structural masonry, marble and ceramics

This subclass authorizes construction work relating to non-structural masonry, marble, granite, ceramics, terrazzo and other similar materials, refractory products, and similar or related construction work.

5.2 Metal fabrication

This subclass authorizes construction work relating to cold-formed steel and aluminium sections used in the construction of non-bearing partitions, wrought metal, welding, and similar or related construction work.

6.2 Wood and plastic work

This subclass authorizes construction work relating to wood and plastic structures such as finishing carpentry, and similar or related construction work.

7. Insulation, waterproofing, roofing and siding

This subclass authorizes construction work relating to fireproofing, waterproofing, insulation, lagging, roofing, siding other than masonry, and similar or related construction work.

8. Doors and windows

This subclass authorizes construction work relating to doors, windows, glazed curtain walls, and similar or related construction work.

9. Interior finishing

This subclass authorizes construction work relating to interior and exterior painting, interior surfaces such as flooring, wall and ceiling and their finishing, and similar or related construction work.

11.2 Special equipment and products

This subclass authorizes construction work that is not reserved exclusively for master pipe-mechanics and electricals relating to all types of equipment and special products that are not already governed by a subclass in Schedule II or this Schedule, and similar or related construction work.

12. Manufactured cabinets and counter tops

This subclass authorizes construction work relating to manufactured cabinets and counter tops, and similar or related construction work.

13.5 Prefabricated or special installations

This subclass authorizes construction work that is not reserved exclusively for master pipe-mechanics and electricals relating to prefabricated or special installations such as cold rooms, pools, skating rinks, excluding their heating and cooling systems, and noise and vibration protection systems.

It also authorizes similar or related construction work.

17.2 Intercommunications, telephone and surveillance

This subclass authorizes construction work that is not reserved for electricals relating to intercommunications, telephone and surveillance systems, and similar or related construction work.

Schedule IV

Licence Subclass Concordance Table

Licence subcategories in force on June 24, 2008		Corresponding licence subclasses on June 25, 2008	
No.	Title	No.	Title
3031	New residential buildings covered by a guaranty plan, Class I	1.1.1	New residential buildings covered by a guaranty plan, class I
		10	Solid fuel local heating systems
		15.7	Residential ventilation
3032	New residential buildings covered by a guaranty plan, Class II	1.1.2	New residential buildings covered by a guaranty plan, class II
		15.7	Residential ventilation
